DATABASE RELATIONSHIP ANALYSIS USING JOINS

Project Title: Big Basket E-commerce Database Management System

Objectives

1. Combine Customer, Product, Orders, and Payment tables.
2. Implement **INNER JOIN**, **LEFT JOIN**, and **RIGHT JOIN**.
3. Retrieve complete order details.
4. Display customer purchase history.
5. Generate multi-table reports.

1. Combining Multiple Tables

The Big Basket database contains different tables that store customer, product, order, and payment information. These tables can be combined using JOIN operations to retrieve related information.

```
SELECT
    c.Customer_ID,
    c.Customer_Name,
    o.Order_ID,
    o.Order_Date,
    o.Total_Amount
FROM Customer c
INNER JOIN Orders o
    ON c.Customer_ID = o.Customer_ID;    Syntax Error at line 9, column 38⏎ ON c.Custome

```

2. INNER JOIN

INNER JOIN returns only the records that have matching values in both tables.

2.1 Customer and Orders

```sql
SELECT
    c.Customer_ID,
    c.Customer_Name,
    o.Order_ID,
    o.Order_Date,
    o.Total_Amount
FROM Customer c
INNER JOIN Orders o
    ON c.Customer_ID = o.Customer_ID;
```

```
