

Big Basket-E-commerce-Database-Management-System

Chapter 3

3.1 Introduction:

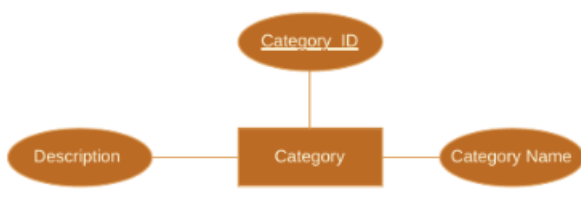

The **Entity-Relationship (ER) Diagram** for the **Big Basket E-Commerce Database Management System** provides a conceptual representation of the database structure. It identifies the main entities, their attributes, primary keys, and the relationships between them. The relationships are defined using appropriate cardinality and participation constraints to represent the interactions among different entities. The ER diagram serves as the foundation for designing the relational database schema and implementing the database efficiently.

2.2 Entity Relationship (ER) Diagram and Relationships

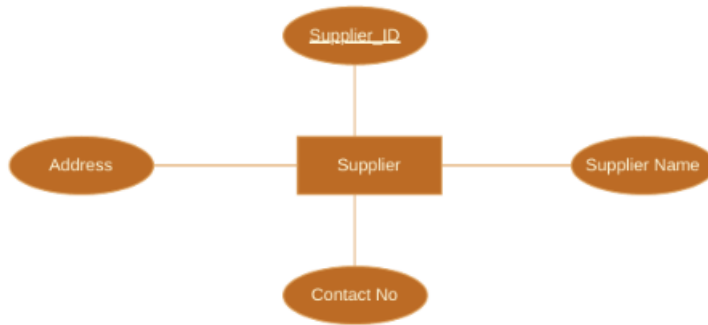

i. Customer

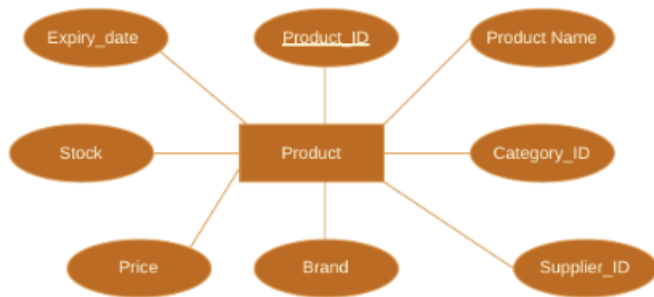

ii. Category

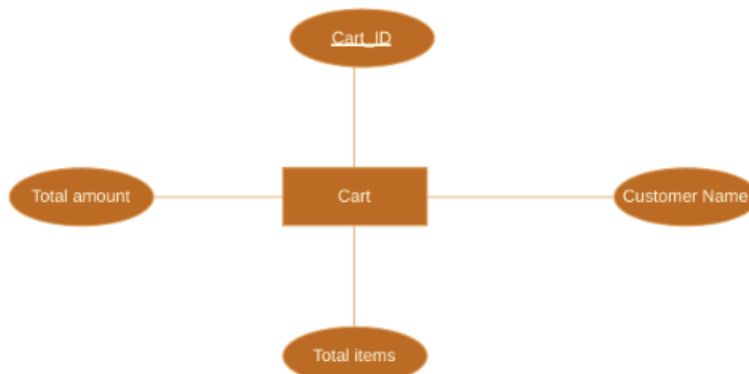

iii. Supplier

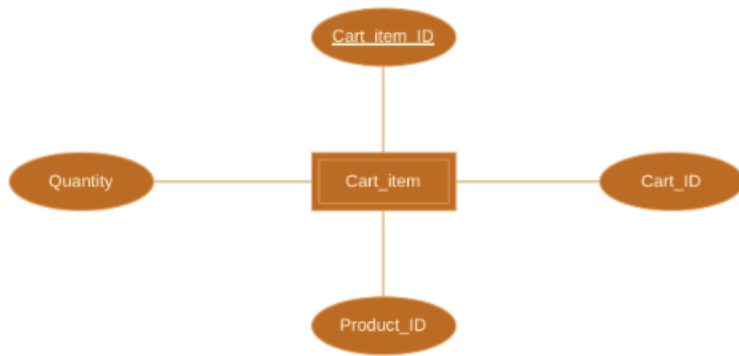

iv. Product

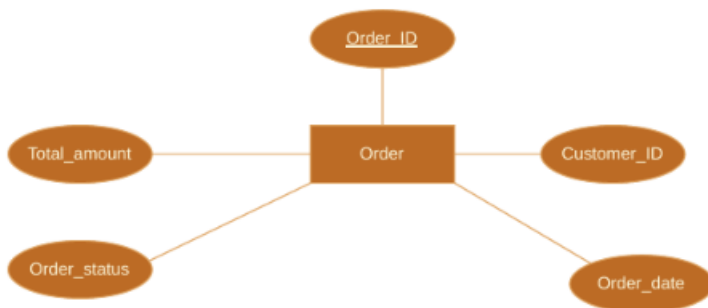

v. Cart

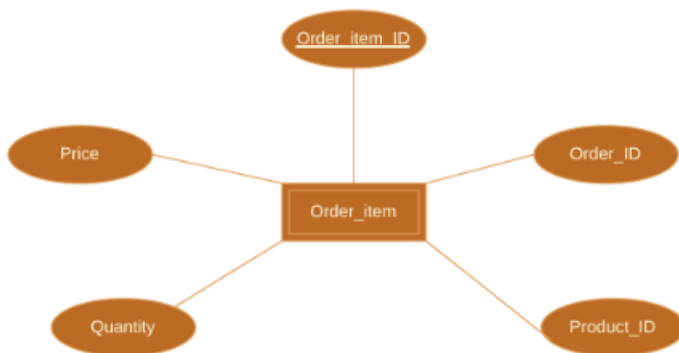

vi. Cart_Item

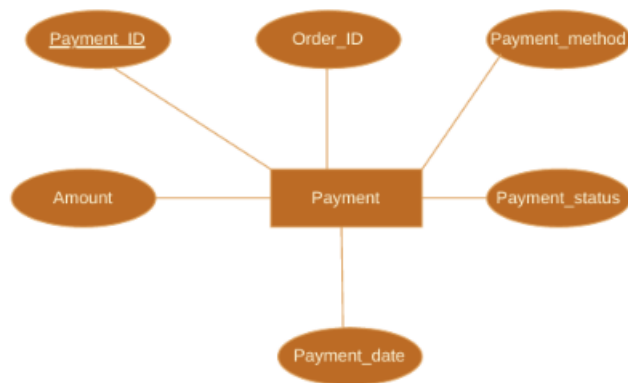

vii. Order

viii. Order_Item

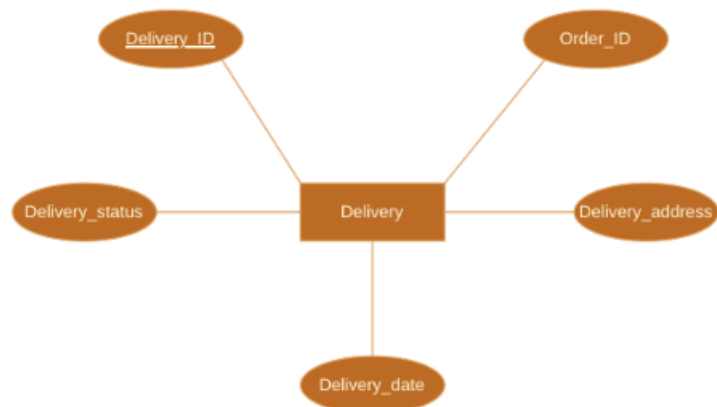

ix. Payment

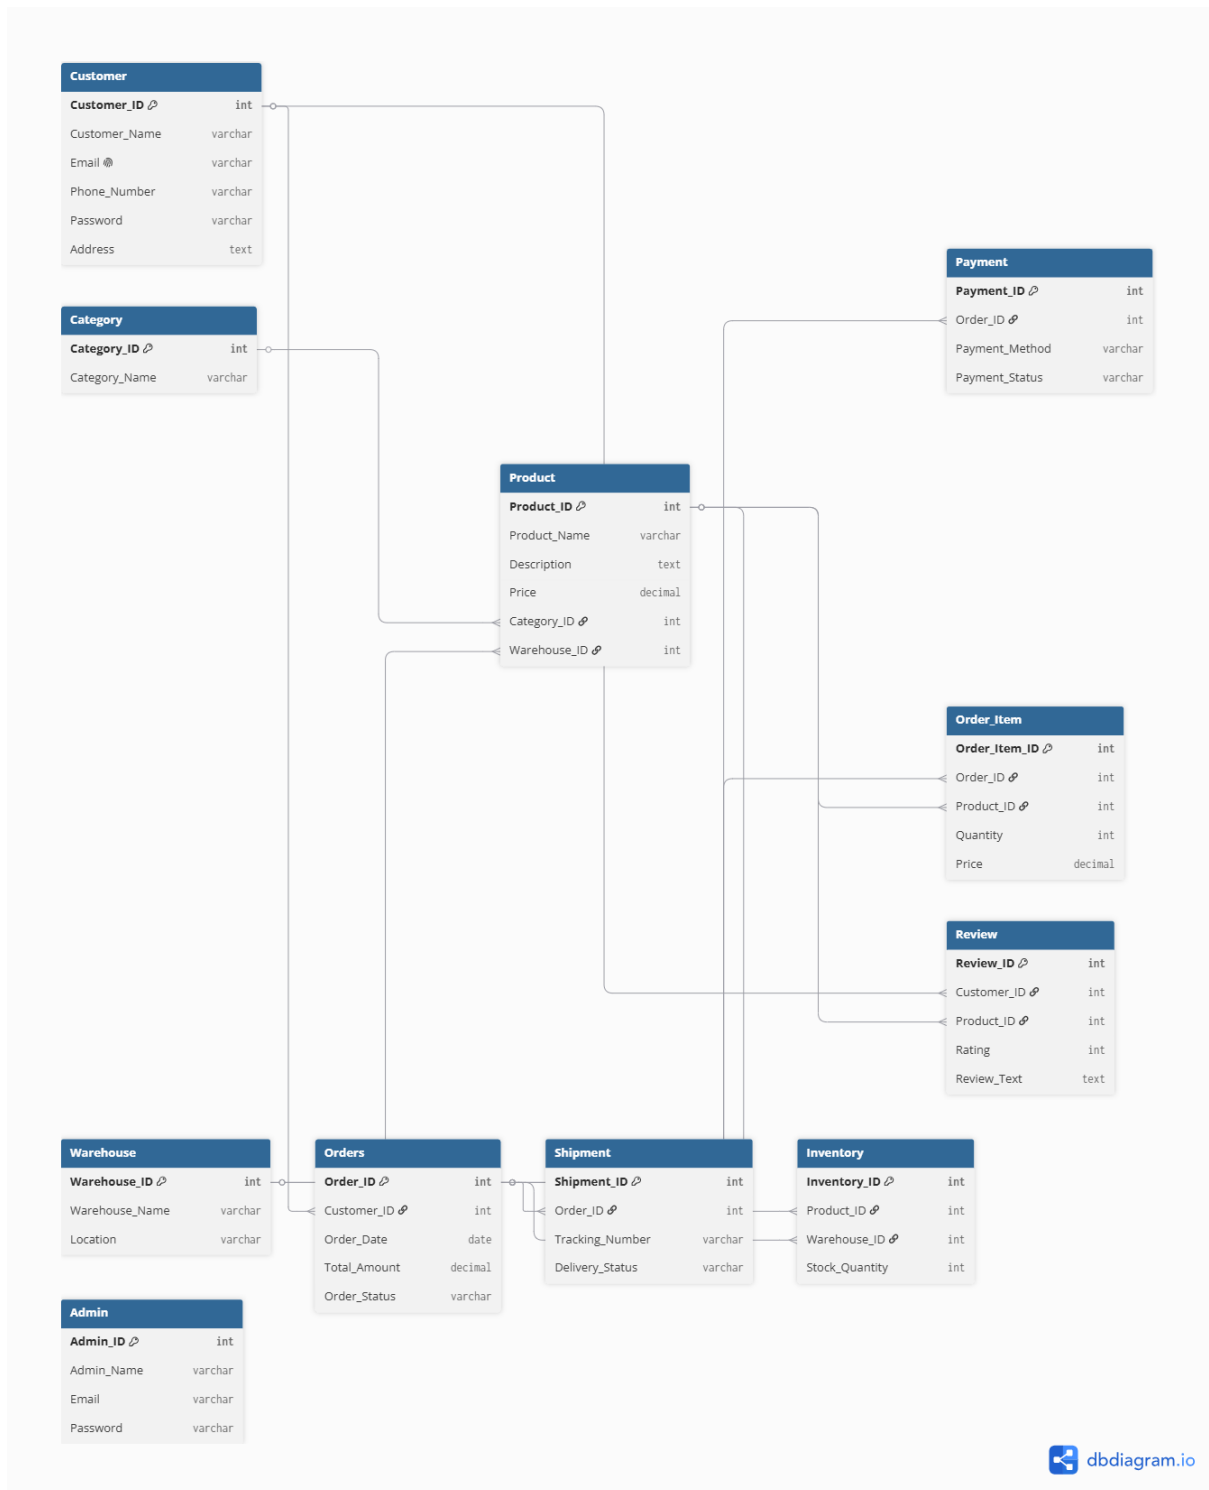

x. Review

xi. Delivery

2.3 Relationships

2.4 Overall ER diagram
